As you complete the Career Preparation Modules and related readings, activities and assignments you have created a Job Search Strategy that is unique to you. Use the following template to document your job search plan at this point in time. As you begin to implement your plan your goals, motivations, job interests, etc. may change. Therefore continue to use this template as way to keep yourself accountable and focused to find a job, employer and career that best fits your needs and is unique to you.

Your Name: Tuhin Subhra De Date: 28 Nov 2025

List your career goals. - Module 2 - Using the SMART goal method develop your list of 3-4 Career goals.

Insert your 3-4 SMART career goals here.

I want to work for a machine learning firm
I want to go on at least 2 interviews in the next two months
I want to land an internship in the next semester
I will be able to build relevant skills in order to build a career in machine learning

List your experience, skills and strengths. Reflect back on the readings and activities you completed in Module 4 – Build Your Brand. Create a list of your top 5 skills and your top 5 strengths. Include a brief example for at least 3 of your top skills, i.e., how you demonstrated the skill, and a brief example for at least 3 of your top 3 strengths, i.e., how you demonstrated the strength.

Insert your top 3 skills with your examples and your top 3 strengths with examples here.

Skills: Machine Learning, Deep Learning, Python programming, SQL, data analysis
I have used these skills to publish 3 publications in the domain of applied machine learning. I have used python programming to code the work and extract results from them. I have even worked as a data science intern working on data visualization, extraction using SQL and performing machine learning with python.

Strengths: Determined, multi-tasker, focused, active learner, goal oriented.
During my internship, I was not professional in SQL. However, I learnt SQL while working there and was able to write proficient queries by the end of my internship. I was parallelly working on my publication drafting and my internship.

Create your list of companies you'd like to work for from the list you created in Module 3 – Researching the Job Market. Modify the list to include 6-8 companies that interest you the most. This is an opportunity to not only list the companies but also include comments why you would like to work there.

Insert your list of the top 6-8 companies and why you would like to work for them here

Adobe - Because of their implementation in machine learning for images
Google - Because of their good research in machine learning
Amazon
Microsoft
Waymo

Create a "to-do" list prior to starting your job search. An effective "to do" list is not just a list of things that you plan to do. Instead it is a list of things you plan to do that includes prioritization and due dates.

Some examples of action items include: researching your top 5 companies of interest to learn more about what they do and their company culture. Or a list of the top 5 job descriptions you plan to research. Or creating a list of your professional references and contacting these references to request permission to use their name and contact information should an employer request your list.

Create a "to do" list of the top 5 items that you plan to accomplish as you start your job search. Set realistic deadlines when each item should be finished so that you are accountable and more likely to complete all tasks. After writing down your "to-do list" items, add the items into a calendar or schedule.

Insert your "to-do" list below. Include realistic dates when you plan to complete each task. Note that this is your "to-do" list at this point in time. As your complete the tasks you will continue to add more to your list.

1. Actively apply for summer internships across various platforms
2. Keep a track of applied jobs with the materials
3. Revise the basics of the interviews
4. Build network with people to get to know about opportunities outside in virtual world
5. Attend job and career fairs.

What is your professional brand? Refer to Module 4 – Build Your Brand – the module in which you created your Professional Introduction (Elevator Pitch).

Include your written Professional Introduction (Elevator Pitch) here.

I am Tuhin Subhra De, enrolled in MS in AI at Northeastern University. I am focused on machine learning research roles. I have 1 year of full-time experience in this and 6 months of research experience. Currently, I am looking for machine learning and data science roles. Will love to connect for any such opportunities.

Participate in networking opportunities - Module 5 – Building Your Network. Review the sites for On campus and Off campus Networking events. (Websites included in the module) Check out different Networking events and identify the ones you are interested to attend. Register for the event!

Insert a list of 3-4 Networking events you plan to attend here
